```
The present sequence represents a secoisolariciresinol dehydrogenase protein. The enzyme is involved in the lignan biosynthetic pathway.

The secoisolariciresinol dehydrogenase proteins have a molecular weight of 27-31 KDa, an isoelectric point of 5.9-6.85, and require weight of 27-31 KDa, an isoelectric point of 5.9-6.85, and require weight of 27-31 KDa, an isoelectric point of 5.9-6.85, and require weight of 27-31 KDa, an isoelectric point of 5.9-6.85, and require corrected are used for the secoisolariciresinol dehydrogenase in plants or to alter lignan, accids are used for the recombinant expression of the enzymes.

It is also used to obtain expression or enhanced expression of secoisolariciresinol dehydrogenase in plants or to alter lignan, bosynthesis. The enzyme is used for production of the pharmacologically active lignan, matairesinol. The secoisolariciresinol dehydrogenase or proteins and nucleic acids can be utilized to: elevate or otherwise concerns and nucleic acids can be utilized to: elevate or otherwise concerns and nucleic acids can be utilized to: elevate or otherwise concerns and nucleic acids can be utilized to: elevate or otherwise concerns and nucleic acids can be utilized to: elevate or otherwise concerns and nucleic acids can be utilized to: elevate or otherwise concerns and nucleic acids and fruits and to food items incorporating material vegetables, grains and fruits and to food items incorporating material vegetables, grains and fruits and to food items incorporating material avariety of purposes, for example as neutriceuticals and dietary auriety of purposes, for example (-) trachogenin which possesses antiviral approximant supply of properties, and (-)-podophyllotoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NSTYIHCDVINEDGVKNAVDNIVSTYGKLDIMFSNAGISDPNRPRIIDNEKADFERVLSV 120

The present sequence represents a secoisolariciresinol dehydrogenase protein. The enzyme is involved in the lignan biosynthetic pathway.

The secoisolariciresinol dehydrogenase proteins have a molecular weight of 27-31 KDa, an isoelectric point of 5.9-6.85, and require veight of 27-31 KDa, an isoelectric point of 5.9-6.85, and require to weight of 27-31 KDa, an isoelectric point of 5.9-6.85, and require veight of 27-31 KDa, an isoelectric point of 5.9-6.85, and require to the 27-31 KDa, and isoelectric point of 5.9-6.85, and require to both and the recombinant expression of the players of the enzymes. The secoisolariciresinol dehydrogenase in plants or to alter lignan of secoisolariciresinol dehydrogenase in plants or to alter lignan anticipal acids can be utilized to: elevate or otherwise atter the levels of health-protecting lignans, including phytoestrogens are enterolactone and enterodiol, in plant species, including phytoestrogens are enterolactone and enterodiol, in plant species, including material derived from such genetically altered plants; genetically altered plants; genetically alter plant species to provide an abundant, natural supply of lighans useful for a variety of purposes, for example as neutriceuticals and dietary supplements; to genetically alter living organisms to produce an abundant supply of optically pure lignans having desirable biological properties, and (-)-podophyllotoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     STYIHCDVTNEDGVKNAVDNTVSTYGKLDIMFSNAGISDPNRPRIIDNEKADFERVLSVN 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents a secoisolariciresinol dehydrogenase protein. The enzyme is involved in the lignan biosynthetic pathway. The secoisolariciresinol dehydrogenase proteins have a molecular weight of 27-31 kDa, an isoelectric point of 5.9-6.85, and require weight of 27-31 kDa, an isoelectric point of 5.9-6.85, and require nucleic acids are used for the recombinant expression of the enzymes. It is also used to obtain expression or the neromed expression of the enzymes. It is also used to obtain expression or enhanced expression of secoisolariciresinol dehydrogenase in plants or to alter lignan biosynthesis. The enzyme is used for production of the pharmacologically active lignan, matairesinol. The secoisolariciresinol dehydrogenase proteins and nucleic acids can be utilized to: elevate or otherwise cutive lignan, matairesinol. The secoisolariciresinol dehydrogenase proteins and nucleic acids can be utilized to: elevate or otherwise alter the levels of health-protecting lignans, including phytoestrogens cuch as enterolactone and enterodiol, in plant species, including derived from such genetically altered plants; genetically alter plant avaiety of purposes, for example as neutriceuticals and dietary supplements; to genetically alter living organisms to produce an abundant supply of optically pure lignans having desirable biological properties, and (-)-tradeplogenin which possesses antiviral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   STYIHCDVTNEDGVKNAVDNTVSTYGKLDIMFSNAGISDPNRPRIIDNEKADFERVLSVN 121

The secoisolariciteshing a secondariant cannot deploy be protein. The enzyme is involved in the lignan biosynthetic pathway. The secoisolaricireshinol dehydrogenase proteins have a molecular weight of 27-31 kDa, an isoelectric point of 5.9-6.85, and require NAD or NADP as a cofactor. The secoisolaricireshinol dehydrogenase mucleic acids are used for the recombinant expression of the enzymes. It is also used to obtain expression or enhanced expression of secoisolaricireshinol dehydrogenase in plants or to alter lignan biosynthesis. The enzyme is used for production of the pharmacologically active lignan, mataireshinol. The secoisolaricireshinol dehydrogenase proteins and mucleic acids can be utilized to: elevate or otherwise proteins and mucleic acids can be utilized to: elevate or otherwise cortive as encerolactone and enterodiol, in plant species, including phytosetrogeness of the relevance of health-protecting lignans, including phytosetrogenes and fruits and to food items incorporating material derived from such genetically altered plants; genetically alter plant species to provide an abundant, natural supply of lignans useful for a variety of purposes, for example as neutriceuticals and dietary supplements; to genetically alter living organisms to produce an abundant supply of optically pure lignans having desirable biological properties, and (-)-podophyllotoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2 QLRTAFARRLEGKVALITGGASGIGETTAKLFSQHGAKVAIADVQDELGHSVVEAIGTSN 61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a secoisolariciresinol dehydrogenase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New nucleic acid molecule encoding an enzyme involved in lignan biosynthetic pathway, useful for producing large amounts of lignans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Secoisolariciresinol dehydrogenase; lignan biosynthetic pathway; lignan; matairesinol; health-protecting lignan; phytoestrogen; enterolactone; enterodiol; neutriceutical; dietary supplement; (-)-trachelogenin; antiviral; (-)-podophyllotoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          .

                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                  임
                                                                                        The invention relates to a method for increasing the guaiacyl (G)-lignan content in seeds of a monocotyledon plant, comprising selecting at least come protein or enzyme integral to the pathway leading to eliginal formation, stably transforming a monocotyledon plant with chimeric gene (GG) constructs having a seed-specific transcriptional regulatory region operably linked to a mucleic acid sequence encoding the enzyme method of the invention is useful for stably transforming a monocotyledonous plant (e.g. rice) with GG constructs resulting in increased expression of the genes encoded by GG constructs. The G-lignan enriched seed composition is useful as a food additive. This sequence represents the secoisolariciresinol dehydrogenase protein relating to the invention.

The enzyme is involved in the lignan biosynthetic pathway. The secoisolariciresinol dehydrogenase proteins have a molecular weight of 27-31 kba, an isoelectric point of 5.9-6.85, and require NAD or NADP as a cofactor. The secoisolariciresinol dehydrogenase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New nucleic acid molecule encoding an enzyme involved in lignan biosynthetic pathway, useful for producing large amounts of lignans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Secoisolariciresinol dehydrogenase; lignan biosynthetic pathway; lignan, matairesinol; health-protecting lignan; phytoestrogen; enterolactone; enterodiol; neutriceutical; dietary supplement; (-)-trachelogenin; antiviral; (-)-podophyllotoxin.

The enzyme is used for production of the pharmacologically active lignan, matairesinol. The secoisolariciresinol dehydrogenase proteins and mucleic acids can be utilized to: elevate or otherwise alter the levels of health-protecting lignans, including phytoestrogens such as enterolactone and enterodiol, in plant species, including butter as enterolactone and enterodiol, in plant species, including derived from such genetically altered plants; genetically alter plant species to provide an abundant, natural supply of lignans useful for supplements; to genetically alter ilving organisms to produce an abundant supply of optically pure lignans having desirable biological properties, for example ()-trachelogenin which possesses antiviral
                                                                                                                                                                                                                                                                                                                                                                                                                            9

The present sequence represents a secoisolariciresinol dehydrogenase protein. The enzyme is involved in the lignan biosynthetic pathway. The secoisolariciresinol dehydrogenase proteins have a molecular weight of 27-31 kDa, an isoelectric point of 5.9-6.85, and require weight of 27-31 kDa, an isoelectric point of 5.9-6.85, and require NAD or NADP as a cofactor. The secoisolariciresinol dehydrogenase concleic acids are used for the recombinant expression of the enzymes. It is also used to obtain expression or enhanced expression of secoisolariciresinol dehydrogenase in plants or to alter lignan active lignan. The enzyme is used for production of the pharmacologically active lignan, matairesinol. The secoisolariciresinol dehydrogenase cortive lignan, matairesinol. The secoisolariciresinol dehydrogenase cortive lignan, matairesinol. The secoisolariciresinol dehydrogenase conterins and mucleic acids can be utilized to: elevate or otherwise such as enterolactone and enterocioli, in plant species, including phytoestrogens such as enterolactone and enterocioli, in plant species, including material
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SIXIHCDVTNEDDVKNAVDNTVSTYGKLDIMFNNAGIADPNKPRIVDNEKADFERVLSVN 125

                                                                                                                                                                                                                                                                                                                                                                                                                                              GVFLCMKHAARVMIPARSGNIISTASLSSTMGGGSSHAYCGSKHAVLALTRNLAVELGQF 183
                                                                                                                                                                                           The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the B-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as herbicides.
                                                                                                                                                                                                                                                                                                                                                               8 ARRLEGKVALITGGASGIGETTAKLFSQHGAKVAIADVQDELGHSVVEAI--GTSNST-- 63

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  178 VELGQFGIRVNCLSPFGLPTAL----GKKFSG--IKNE--EEFENVINFAGNLKGPKFNV 229
                                                                                                                                                                                                                                                                The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the B-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as herbicides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                85

This sequence is encoded by the H2 clone. The Ts2 protein in maize is very similar to Ts2 protein found in rice, and both these sequences show considerable homology to bacterial hydroxysteroid dehydrogenases. Ts2 has a mol. wt. of 35 kD and a predicted pI of 6.7. The Ts2 coding sequence and its promoter, may be used to control sexual development of floral tissue and to provide exclusively male

The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are useful as herbicides.

No. 3.3e-55; tive 50; Mismatches 88; Indels 29
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 3, Application US/08440856A

Patent No. 5750873

GENERAL INFORMATION:
TITLE OF INVENTION: MATERIALS AND METHODS FOR PRODUCING
TITLE OF INVENTION: MATERIALS AND METHODS FOR PRODUCING
TITLE OF INVENTION: PLANTS WITH SINGLE-SEX FLOWERS
NUMBER OF SEQUENCES: 9
CORRESPONDENCE ADDRESS:
ADDRESSE: MORRISON & FOERSTER
STREET: 2000 FENNSYLVANIA AVE. N.W.
CITY: WASHINGTON
STATE: D.C.
COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          COMPUTER READABLE FORM:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 5747, Application US/09328352

Sequence 5747, Application US/09328352

Patent No. 6562958

GENERAL INFORMATION:
APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER TITLE OF INVENTION: BADMANNII FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: GTC99-03PA
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT PILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
SEQ ID NOS: 8252
                                                                                                                                                                  APPLICATE: MARC J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT PILING DATE: 1999-02-18
PRIOR PLICATION NUMBER: US 60/074,788
PRIOR PILING DATE: 1998-02-18
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR APPLICATION NUMBER: US 60/094,190
NUMBER OF SEQ ID NOS: 33142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                             273

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

probable alcohol dehydrogenase At2g47120 [imported] - Arabidopsis thaliana
NyAlernate names: hypothetical protein F14M4.5
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Species: Arabidopsis thaliana chromosome II BAC F14M4 genomic sequence.
C;Accession: T02176
A;Ball Data Library, September 1998
A;Beernde number: Z1409
A;Reference number: Z1409

MSGRA T. Ohtomo R., Miyauchi K., Fukuda M., Yano K., Takagi M.;
"Cloning and sequencing of a 2,5-dichloro-2,5-cyclohaxadiene-1,4-diol
dehydrogenase gene involved in the degradation of gamma-
hexachlorocyclohaxane in Pseudomonas paucimobilis.";
J. Bacteriol, 176:317-3125 (1994).
I. PUNCTION: DEGRADATION OF 2,5-DICHLORO-2,5-CYCLOHEXADIENE-1,4-DIOL.
(2,5-DDCL) INTO 2,5-DICHLORO-2,5-CYCLOHEXADIENE-1,4-DIOL.
(3,5-DDCL) INTO 2,5-DICHLORO-3,5-DCHO).
I. PATHWAY: Gamma-hexachlorocyclohexane degradation; third step.
(SDR) family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MEDLINE=22638325; PubMed=12621044; Sogabe S., Yoshizumi A., Fukami T.A., Shiratori Y., Shimizu S., Sogabe S., Yoshizumi A., Fukami T.A., Shiratori Y., Shimizu S., Takagi H., Nakamori S., Wada M., The crystal structure and stereospecificity of levodione reductase from Corynebacterium aquaticum M-13."; J. Biol. Chem. 278:19387-19395(2003).
-: FUNCTION: Catalyzes the regio. and stereoselective reversible NAD-dependent reduction of (6R)-2,2,6-trimethyl-1,4-cyclohexanedione (1evodione) to (4R,6R)-4-hydroxy-2,2,6-trimethylcyclohexanone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           + NAD(+) = (6R)-2,2,6-trimethyl-1,4-cyclohexanedione + NADH.
-!-RNZYME REGULATION: Strongly activated by monovalent cations, such as K(+), Na(+), and NH4(+).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         æ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                10 RLEGKVALITGGASGIGETTAKLFSQHGAKVAIADVQDE----LGHSVVEAIGTSNSTYI

Nuclaic Acids Res. 28:1397-1406(2000).
-!- CATALYTIC ACTIVITY: (3R)-3-hydroxyacyl-[acyl-carrier protein] +
NADP(+) = 3-oxoacyl-[acyl-carrier protein] + NADPH.
-!- PATHWAY: Fatty acid biosynthesis pathway; first reduction step.
-!- SATHWAY: Belongs to the short-chain dehydrogenases/reductases (SDR) family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Bacteria, Proteobacteria, Gammaproteobacteria, Enterobacteriales,
